

## ABSTRACT

A module for containing electrical components is disclosed. The module has a first sidewall member which forms a side wall of the module. The first side wall member has a base with a top surface and a bottom surface and a first side edge and a second side edge. The first side wall member also has a front edge and a rear edge extending from the side edges. The first side wall member also has a top member extending upwardly from the first side edge and a bottom member extending upwardly from the second side edge, the top member having a top surface and a bottom surface as well as a first side edge and a second side edge. The first side edge is adjacent to the first side edge of the base. The bottom member has a top surface and a bottom surface as well as a first side edge and a second side edge, the first side edge of the bottom member being adjacent to the second side edge of the base. There is also a front plate. The front plate has a front surface and a rear surface as well as first and second side edges. The front plate is removably connected to the first member. There is also a rear plate. The rear plate has a front surface and a rear surface as well as first and second side edges. The rear plate is removably connected to the first member. There is also a second member which forms a second side wall of the module. The second side member has top and bottom edges as well as front and rear edges. The second side member is removably connected to the top and bottom members of the first member.
